Music Streaming Data Analysis Report

Analyze Music Streaming Data

Overview

This dashboard analyzes music streaming data using five key visualizations:

- Ranking by Popularity
- Average Energy per Artist
- Distribution of Popularity
- Energy Distribution
- Correlation between Energy and Danceability

The analysis identifies streaming trends, performance patterns, and relationships between audio features.

Ranking by Popularity

The top 5 most popular songs are:

- One of The Girls – 92
- Starboy – 91
- One Dance – 91
- Blinding Lights – 90
- The Hills – 88

Insights:

- All top songs have popularity scores above 88, indicating strong streaming performance.
- The difference between ranks is small, suggesting competitive streaming numbers among top tracks.
- High popularity songs are likely mainstream, globally recognized hits.

Average Energy per Artist

Top artists by average energy:

- Martin Garrix, Justin Mylo, Mesto – 90
- Martin Garrix – 87
- Metallica – 79.3
- Martin Garrix, Jex – 73
- Martin Garrix, Macklemore – 72

Insights:

- Electronic/Dance artists (e.g., Martin Garrix collaborations) have the highest energy levels.
- Rock artist Metallica also shows relatively high energy.
- High-energy artists tend to produce intense, upbeat music.

Distribution of Popularity

The histogram shows most songs fall within the **60–80 popularity range**.

- Highest concentration around 70–80
- Few songs below 50
- Few extremely high (above 90)

Interpretation:

- Most songs perform moderately well.
- Only a small group achieves very high popularity.
- Streaming success appears concentrated among select hits.

Energy Distribution (Pie Chart)

Energy levels categorized as:

- Low Energy (0–40)
- Medium Energy (41–70)
- High Energy (71–100)

Observation:

- Majority of songs fall into Medium and High energy categories.
- High-energy songs form a significant portion.
- Very few low-energy songs.

Correlation : Energy vs Danceability

The scatter plot shows:

- An upward trend line.
- Moderate positive correlation.
- Some dispersion of points.

Interpretation:

As Energy increases, Danceability tends to increase.

Conclusion

The analysis suggests that:

- Energy is an important factor in streaming success.
- Danceability and Energy are positively related.
- Highly energetic songs are more common among top-streamed tracks.
- Popular music trends favor upbeat and engaging audio characteristics.

This dashboard effectively highlights streaming patterns and relationships between musical attributes.
